

# PETERBILT ROOF 3 YR FOLLOW UP INSPECTION

September 2014

**RUSTGRIP**® was applied to the Gutter System, Gutter Braces, Screw Edges and all seams to encapsulate and protect the metal roof in 2011. It did not receive maintenance until 3 years later in 2014 when we inspected the roof to ensure the integrity of the seal. Once again **RUSTGRIP**® has proven to be immensely durable as even without maintenance. The roof was as it was when it was initially encapsulated 3 years prior.

The original work from 2011 can be viewed [HERE](#)

3 years of sludge build-up

Once cleaned, the previously applied **RUSTGRIP**® looked to be in good condition.

### **Seams & Screw Edges**

### Vent Collars & Caps
