

YOKOHAMA TIRE FACILITY

Clark Freeport Zone, Philippines 2023, IE5

August 13th 2014

The tire facility tested HPC® COATING on a 5 sq. ft. section of previously uninsulated 4 inch black iron piping.

HPC® COATING was applied at a thickness of 934 mils WFT [23.72 mm, 9/10"] / 700 mils DFT [17.78 mm, 7/10"] which proved very effective, bringing the temperature of the piping from **185°C** [367°F] to **40°C** [104° F]

A video of HPC ® being applied on-site can be viewed [HERE](#).
