

BUDGET CAR WASH

1996

Vancouver International Airport - QTA (Quick Turn Around)

NON-SKID®

Problem: FP Construction called us in because the floor was having to be re-coated every 3 - 4 months to meet WCB Non-Slip Regulations.

Solution: **NON-SKID**® (Applied in 1996 and still there today)

NON-SKID® is a tough, two component aliphatic polyurethane enamel, which produces a uniquely hard and durable coating film. It holds a unique ceramic particle that gives the surface a slip resistance even when inclined and wet.

NON-SKID® will demonstrate unsurpassed semi gloss retention, color retention, and chalk resistance, when utilized for exterior coating situations.

NON-SKID® will provide outstanding resistance to water, humidity, stains, chemicals, solvents, as well as tremendous scuff, mar, and impact resistance.

FLORA FARMS (2002)

NON-SKID® - High Gloss as a waterproof, non slip thin film deck coat
